

Eyeglass Prescription (Rx) Rechecks

If you experience difficulty adapting to a new eyeglass prescription, Lexington Eye Associates is happy to provide a prescription recheck.

Prescription rechecks performed within **three (3) months** of the original refraction date are provided at no additional charge. Rechecks requested **more than three (3) months** after the original prescription was issued will require a new refraction examination, and the applicable refraction fee will apply.

Please note that refraction services are often not covered by medical insurance plans, including Medicare, and patients are responsible for any applicable refraction charges.
